

*flex*KRETE

WORLD'S BEST CONCRETE REPAIR PRODUCT

THEY SAID IT WOULDN'T WORK!

On the George Bush Freeway,
when we said to prop a 2x4 on the bottom for support, no need for re-
bar, leave the broken pieces in place, and just fill all the voids with
FLEXKRETE, the engineers said it would crack and fall off.

The options were:

1. Order specially made cap (long-term process), rent a crane (at high cost) to place cap, while blocking traffic.
2. Demo section & dispose of debris, ALL NEW RE-BAR, build forms, re-pour section, cure for 30 days, then paint.
3. Use Flexkrete--CURED IN AN HOUR---PAINT IN AN HOUR.

FlexKrete was installed as described above,

NO REMOVAL, NO RE-BAR, and only 4 gallons of FlexKrete were needed.

They could have painted it in 1 hour, but instead, waited until the next day.

Many Hours and THOUSANDS OF \$\$\$\$\$\$ SAVED

EIGHTEEN YEARS LATER, it's still there, and with no cracks.

This same product is used for floor & street overlays, potholes, spalls and overhead.

"IT'S TUFF STUFF!"

Almost 20 Years & Thousands of Jobs
